LAB & LIFE SCIENCE

Designed for trace level moisture analysis in nitrous oxide, the HALO H₂O offers:

- Low parts per billion (ppb) moisture detection capability in medical N₂O
- Absolute measurement (freedom from calibration gases)
- Wide dynamic range—over four orders of magnitude
- Low cost of ownership and operational simplicity
- Clean technology—no external calibration gases required
- Compact analyzer footprint

The HALO H₂O analyzer provides users with the unmatched accuracy, reliability, speed of response and ease of operation that users of Tiger Optics analyzers have come to expect. Featuring Tiger Optics' powerful Cavity Ring-Down Spectroscopy-based moisture sensor in a compact and economical package, this versatile analyzer allows users to measure trace moisture in nitrous oxide (N₂O) and other gases.

Users can also expect significant cost savings, with no need for periodic sensor maintenance, span calibrations, purifier replacements, and pump rebuilds. As a result, the HALO H₂O analyzer is ideally suited to many applications where moisture measurement is extremely critical. These applications include process control, continuous quality control, and cylinder analysis for medical and calibration gases and more.
